

BEST™ TECHNOLOGY PRODUCT LINE

BEST™ products are hand-held, battery-powered biofeedback micro-current therapy devices that apply relaxation-stimulation pulses to affected to stimulate the body's natural responses to massage therapy. By placing and holding the on-board electrodes on the back of the BEST™ device on the skin, BEST™ products provide interactive beep and ring tones to indicate when desired results are achieved and as measured amounts of time have passed. A tick every 30 seconds, double beeps every 2 minutes, a chirp for relaxation application and a longer ring to indicate when the relaxation application has been reached. Lights on the face of BEST™ devices indicate power level and mode selection.

Med-Best™ \$895
Therapeutic Massager
 Soothing massage therapy to relax and stimulate the body's natural responses for minor chronic conditions
